

February 2025

Spill Kits for the Workplace

Spill kits are designed to contain the essential materials and protective equipment to clean up leaks and spills effectively and safely that will not pose a health or safety threat to the workers or the environment. Workplaces should consider two types of spill kits...

Chemical Spill Kits...these spill kits will provide materials to contain, clean up, personal protective equipment and means for safe disposal of the chemical in question. These chemicals can range from oil, grease and other liquids that could spill in the workplace.

Biohazardous Spill Kits...these spill kits provide materials to contain, clean up and personal protective equipment to protect the worker when dealing with these types of spills. Biohazardous materials could include bodily fluids such as blood or vomit.

Northern Safety Solutions provides all types of spill kits, call NSS to discuss which spill kit is right for your workplace.

Respirator Fit Testing for Workers and Students

NSS provides fit testing for N-95, half-face and full-face respirators. We conduct the fit tests at our office or onsite for groups or organizations. Northern Safety Solutions provides special rates for students.

Call our office to book your fit test!
